DETAILED ACTION

Allowable Subject Matter

1. Claims 16 and 25 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention describes a multicarrier radio communication system comprising a first communication device that transmits a signal and includes a transmitting antenna for each channel; a by-channel known-signal generating unit that generates known signals by channels, the known signals being spread by a code orthogonal between channels; a common known-signal generating unit that generates a common known signal that is common to the channels; and a transmission-signal generating unit for each channel that generates a transmission signal for a corresponding channel by allocating user data, the common known signal, and the known signals by channels according to a prescribed frame format, the transmission signal being a signal to be transmitted via corresponding antenna; and a second communication device that receives the signal from the first communication device and includes a receiving antenna for each channel; an initial synchronizing unit that establishes a timing synchronization and a frequency synchronization using the common known signal; and a by-channel known-signal extracting unit that extracts the known signals by channels from a reception signal for each channel, which is a signal received via the receiving antenna, after establishing the timing synchronization; and a

despreading unit that despreads the reception signal with the orthogonal code based on information concerning the timing synchronization; a matched filtering unit that calculates channel impulse responses by channels from the signal that is despreaded; and a preceding-wave searching unit that determines a preceding wave position based on the channel impulse responses, wherein the by-channel known signal extracting unit extracts the known signals by channels based on the preceding wave position. The closest prior art, Ma et al. (US 2003/0072255 A1) in view of Ketchum et al. (US 2004/0179627 A1) together disclose a similar system except a preceding-wave searching unit that determines a preceding wave position based on the channel impulse responses, wherein the by-channel known signal extracting unit extracts the known signals by channels based on the preceding wave position. This distinct feature has been added to claims 16 and 25, thus rendering claims 16 and 25 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
